

Bangalore Ride-Hailing

Trip & Conversion Analysis Report

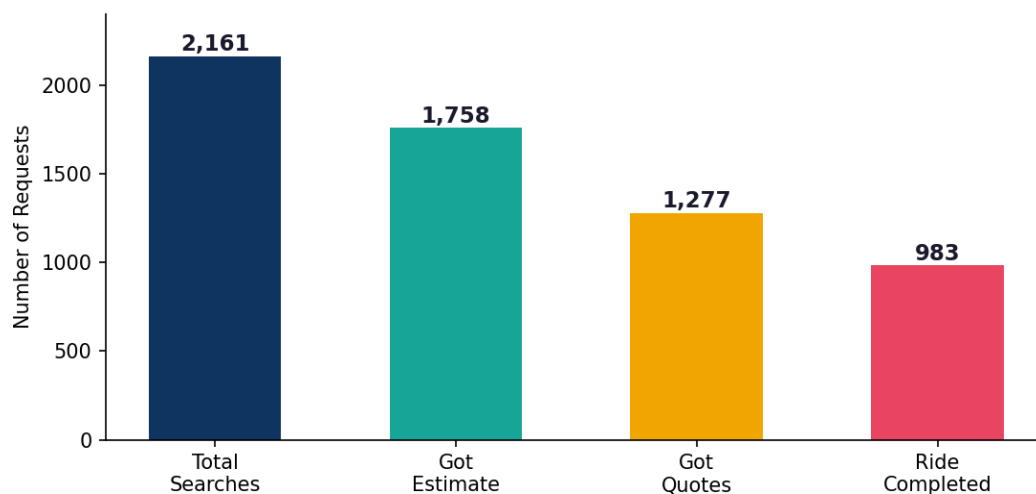

Yeh report Ola Cabs ke Bangalore operations ke **trip_details**, **trips** aur **assembly (area)** data ko analyze karke banayi gayi hai. Maqsad hai search-to-ride conversion funnel samajhna, sabse behtar aur sabse kamzor performing areas identify karna, aur trip duration ke saath fare/distance ka relationship dekhna.

1. Executive Summary — Overall KPIs

Metric	Value	Remark
Total Searches	2,161	Booking demand
Searches → Got Estimate	1,758 (81.4%)	Healthy
Estimate → Got Quotes	1,277 (72.6%)	Biggest drop-off stage
Rides Completed (End Ride)	983	Final conversions
Overall Conversion Rate	45.5%	Search → Completed Ride
Total Fare Collected	Rs. 7,51,343	Across 983 trips
Total Distance Covered	14,148 km	All completed trips
Average Trip Duration	12.3 minutes	Per completed trip

2. Booking Funnel

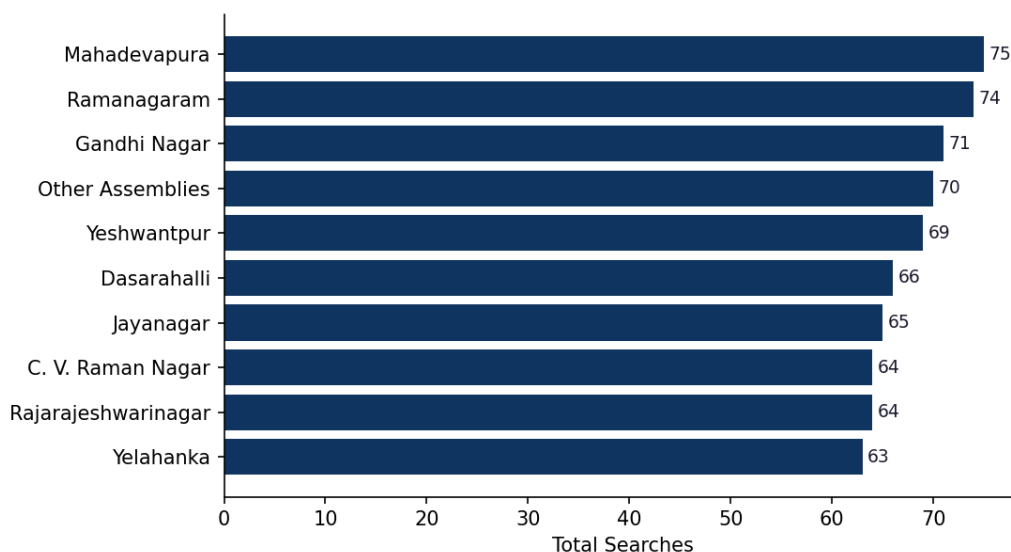

Neeche diya gaya funnel dikhata hai ki kaise ek search request dheere-dheere kam hoti jaati hai jab tak woh ek complete ride nahi ban jaati.

Booking Funnel: Search se Ride Complete tak

Key Insight: Sabse bada drop-off "Got Estimate" se "Got Quotes" ke beech hota hai (~27% log estimate dekhne ke baad quote nahi lete). Yeh stage pricing transparency ya app UX improve karke behtar banayi ja sakti hai.

3. Area-wise Performance (Bangalore Assemblies)

Data mein Bangalore ke 37 alag-alag areas (assembly constituencies) cover hote hain. Neeche top 10 areas dikhaye gaye hain jaha se sabse zyada searches aayi.

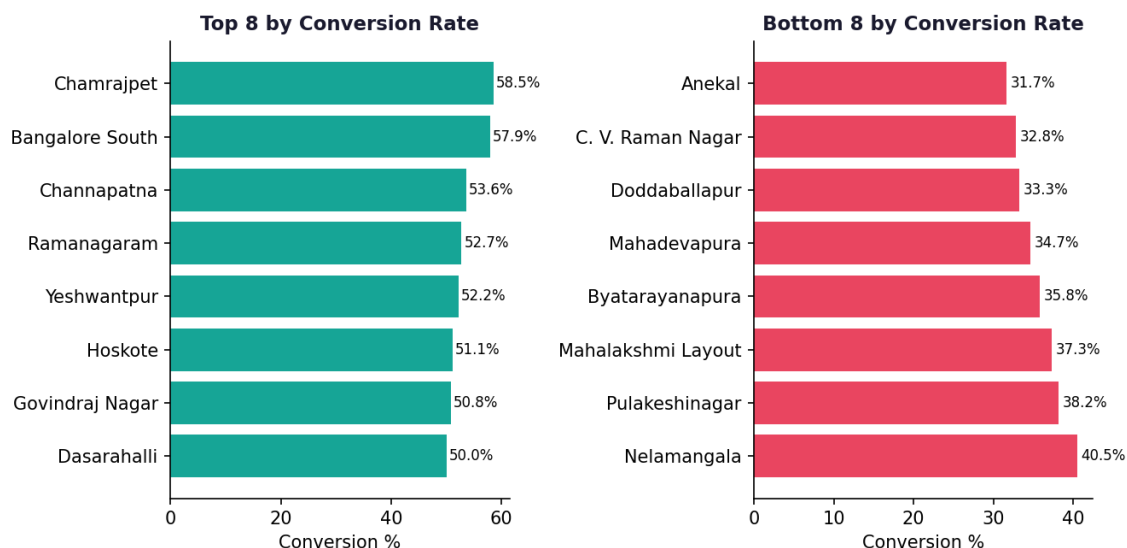

Top 10 Areas by Search Volume

Top 10 Areas — Detailed Numbers

Area	Searches	Got Quotes	Rides Done	Conv. %
Mahadevapura	75	43	26	34.7%
Ramanagaram	74	46	39	52.7%
Gandhi Nagar	71	40	32	45.1%
Other Assemblies	70	39	30	42.9%
Yeshwantpur	69	40	36	52.2%
Dasarahalli	66	39	33	50.0%
Jayanagar	65	40	31	47.7%
Rajarajeshwarinagar	64	35	32	50.0%
C. V. Raman Nagar	64	34	21	32.8%
Yelahanka	63	43	29	46.0%

4. Conversion Rate — Best vs Worst Areas

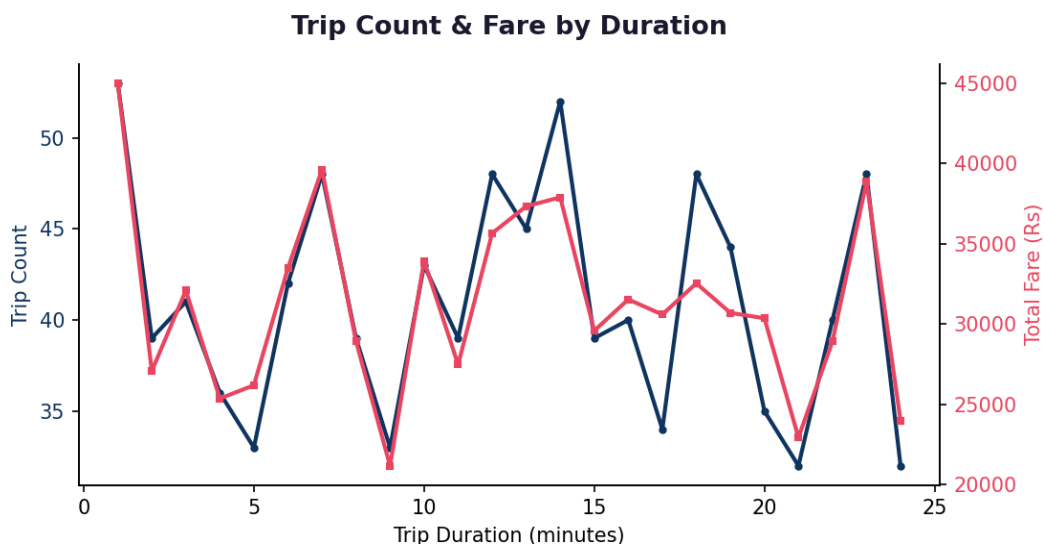

Sirf search volume se pura picture nahi milta — kuch areas mein searches kam hain lekin conversion rate bahut achha hai, aur kuch high-demand areas mein conversion kamzor hai.

Key Insight: Chamrajpet (58.5%) aur Bangalore South (57.9%) best conversion de rahe hain. Iske against Mahadevapura jaise high-search area mein conversion sirf 34.7% hai — yani wahan demand hai par kuch friction (supply shortage, pricing, ya wait time) logo ko ride book karne se rok raha hai.

5. Trip Duration vs Fare/Volume Trend

Yeh chart dikhata hai ki trip duration (minutes mein) badhne ke saath trip count aur total fare kaise badalta hai.

Key Insight: Short trips (1–2 min) aur medium trips (13–14 min) mein sabse zyada volume dikhta hai. Fare trend duration ke saath roughly badhta hai lekin kuch spikes bhi hain, jo suggest karta hai ki fare sirf duration pe nahi, distance aur surge pricing pe bhi depend karta hai.

6. Recommendations

- **Quote-stage drop-off kam karo:** 27% users estimate ke baad quote nahi le rahe — pricing clarity aur faster quote-loading time pe focus karo.
- **Mahadevapura & C.V. Raman Nagar** jaise high-demand, low-conversion areas mein driver supply badhao ya surge pricing recheck karo.
- **Chamrajpet, Bangalore South, Channapatna** jaise high-conversion areas mein marketing spend badhaya ja sakta hai kyunki wahan ROI zyada milega.
- **Short-duration trips (1–2 min)** ka high volume dikhata hai ki bahut se short-distance riders hain — inke liye ek dedicated low-fare micro-ride option consider karo.
- **Overall 45.5% conversion** industry ke hisaab se average hai; funnel ke har stage ko 5–10% improve karke overall conversion 55-60% tak le jaaya ja sakta hai.
